

# FLX™

## Acrylic Render System

FLX™ is a highly flexible, durable and water-resistant acrylic plaster membrane, that is applied over substrates to assist in providing resistance against cracking.

More architects are opting for Flexible Acrylic Plaster instead of cement based plaster. Cracking in any plaster coating is not only unsightly but cracking in the cladding can allow water into the house and begin the process of expensive building damage.

With Masons FLX™ you are wrapping your entire house with a flexible, durable, water-resistant render, greatly reducing the chance of moisture damage to the building through the substrate.

This non-cement based water-borne acrylic plaster system contains aggregate to provide flexibility and excellent adhesion qualities, making it a favorite among plasterers.

FLX™ has a 20 Year system warranty, is manufactured in NZ for New Zealand conditions and it's a proven product that has been on the market for over 10 years.

FLX™ Applied to Masons XRV™ Panel

“FLX gives the client and architect extra reassurance around adding extra protection to the house and it doesn't cost much more than normal cement based plaster, so really it's a no brainer.”

**Dion Maheno**  
DJ Plastering Ltd, Auckland

*Dion has been applying FLX™ over Masons™ Enviro Panel (AAC), Thermalcrete™ Panel and Masonry Block*

## SYSTEM PROCESS

- 1/ Selected Substrate**  
Suitable for multiple substrates
- 2/ Optional Levelling Coat**  
See Data Sheet for more info
