from Heat

Can Burn for
up to 24 Hours

Safety Features

PROTECTION FROM HEAT

Powered by liquid gas from the cylinder hidden in the housing. Flames are enclosed in a glass cell which shields us from direct contact with fire.

The glass is special heat resistant ceramic used in traditional fireplace inserts which can with-stand temperatures up to 800°C.

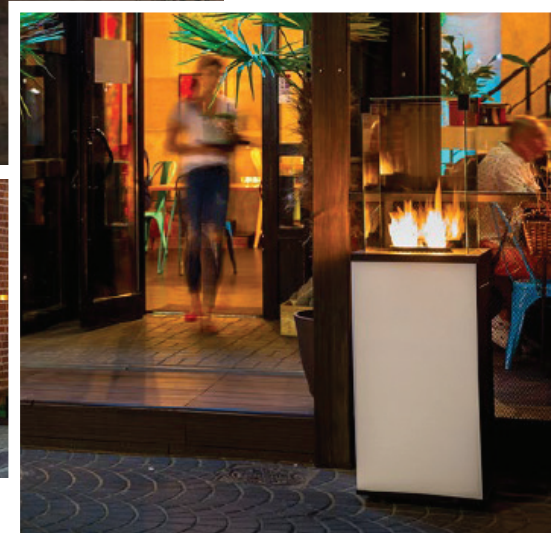

LOCKABLE BASE - For safety and security.

THERMOCOUPLE SENSOR

This sensor cuts off the gas supply to the burner if the control flame of the burner is extinguished.

NO DEPENDANCE ON ELECTRICITY

In the absence of electricity, this heater will continue to illuminate the terrace or garden.

VERSATILE

Capture the passer by with the sophisticated appearance. Great at the entrance of your restaurant or business or on the deck at home.
